Malang, East Java, Indonesia

An undergraduate student at Universitas Negeri Malang with experience building web software applications across client and server layers. As a freelance developer, experienced in delivering end-to-end solutions ranging from requirements analysis and system design to implementation and deployment across various business domains, particularly in serverless and shared hosting environments. Passionate about building modern web development using Next.js, Laravel, and Vue.js with a strong interest in application scalability and maintainable software architectures. Familiar with relational database management using MySQL and PostgreSQL to support reliable data processing and system consistency, while also handling client-server integration, asynchronous data flows, and responsive user interactions. Continuously interested in improving efficient development workflows and creating intuitive digital experiences through modern web technologies.

## Experiences

### Software Engineer (Part-Time)

November 2025 – Present

*PT Intervyou Labs Indonesia | Indonesia*

- Collaborate with the team to develop and maintain a SaaS AI-powered career preparation platform using Next.js, Prisma ORM, and MySQL.
- Implement new features across frontend and backend including dashboard enhancements and system integrations aligned with product and business requirements.
- Perform bug fixing and issue resolution across production and staging environments, improving application stability and reducing user-reported errors.
- Conduct code refactoring to improve code quality, maintainability, and performance ensuring compliance with clean code and best practices.
- Collaborate with non-technical and technical teams to continuously enhance system reliability, performance, and user experience in a fast-paced development environment.

### Fullstack Web Developer (Freelance)

August 2024 – March 2025

*Pastijadi Digital Solution | Surabaya*

- Developed and maintained an integrated web platform for a batik business using Laravel, Bootstrap, and MySQL, covering customer-facing pages, secured administrative operations, and structured content management across products, articles, and media assets.
- Implemented relational data models in MySQL with validation workflows to maintain data consistency, support multi-image asset handling, and manage structured publishing operations across application modules.
- Built secure access control through Laravel authentication, verification, and role-based authorization while developing server-rendered administrative interfaces using Blade Template and Bootstrap.
- Managed production readiness in a cPanel shared hosting environment by handling environment configuration, database preparation, asset delivery, and post-release validation to maintain stable live application behavior.

### Fullstack Web Developer (Freelance)

June 2024 – November 2024

*PUI-PT DLI Universitas Negeri Malang | Malang*

- Developed core workflows for an Islamic educational platform using Laravel, MySQL, and Tailwind CSS, enabling scalable content delivery, user interactions, and integrated application processes across multiple modules.
- Implemented 20+ request handlers and business logic for authentication, content management, and user-driven operations with structured server-side processing.
- Applied token-based authentication and role-based access control (RBAC) to enforce secure authorization across protected routes and administrative features.
- Built server-rendered interfaces with Laravel Blade Template and Tailwind CSS integrated into application services to support responsive interactions, consistent state management, and reliable data flow across the platform.
- Structured application logic using validation workflows, relational data handling, and MySQL-backed persistence to improve maintainability and system scalability.

## Educations

### Universitas Negeri Malang

2022 - 2026

S1 Teknik Informatika

GPA 3.76/4

### SMA Negeri 3 Malang

2019 - 2022

Matematika dan Ilmu Pengetahuan Alam

GPA 89/100

## Core Skills

---

**Programming Languages** : JavaScript, TypeScript, PHP, Python, Go  
**Libraries / Frameworks** : React.js, Next.js, Laravel, ExpressJs, Vue.js, TailwindCSS, Bootstrap  
**Tools** : VS Code, Git, Postman, Docker, Jira

## Languages

---

Bahasa Indonesia (native), English (elementary proficiency)
